

WIDDAR ROCK POWDER

WI65

Rock powder that fortifies, rebalances and strengthens plants and soils. It is suitable for any type of crop and soil.

PROPERTIES

The rock powder is prepared and energized using the **Trinium*** method. Where the product has been sprayed, **NUTRIAS** have avoided the area.

This product is especially suitable for land that is **cultivated, in parks, gardens, etc.**

This product respects the environment and animals.

APPLICATION

1 kg (2.2 lbs) of product is diluted in approx. 200-250 liters (50-65 gallons) of water and sprayed **over 10000m² (2.5 acres)**.

Repeat approx. **every 6 months**. Always check for the presence of **NUTRIAS** and if necessary repeat the application 2-3 times every 15 days.

For best results treat **3 weeks before the period of expected maximum presence**.

STORAGE

Always keep the product dry, well sealed and out of the reach of children.

AVAILABLE in 3Kg (6.6 lbs), 5kg (11 lbs), 10 kg (22 lbs), 25kg (55 lbs) packs

For a correct use under specific soil and crop conditions, please seek advise from our technical department.

USAGE

Rock powder can be diluted in two ways:

- Pour the powder in the sprayer tank at the rate of 1 kg/ha, then add water (200/250 litres of water per kg). After about 30 minutes, the product is ready to be sprayed.
- In the event of problems with clogged-up sprayer nozzles, or of tear of the pump bearings, place the powder in a bucket, add 10/15 litres of water, stir 2-3 times. After about 30 minutes, pour the solution into the sprayer tank using a suitable filter. Then add the rest of the water.

Please note that the diluted solution does not expire when kept in a tightly sealed tank.

NOTICE

Please note that the usage of the specific products on the plants and the soil needs to always be used within the whole **Trinium** agricultural method, otherwise they will not be effective. The products must also be contained and applied using barrels and pumps free of any residue of non-Widdar products. Barrels must be thoroughly washed with caustic soda or, alternatively, treated internally and externally with **WI21 ROCK POWDER** fortifier.

*If it rains within 3 hours of the application the effectiveness of the treatment will be reduced by about 20%.
If it rains within 2 hours the whole treatment will be ineffective and must be repeated.*

AVERAGE MINERALOGICAL ANALYSIS	
QUARTZ	20-40%
CALCITE	5-30%
SODIUM FELDSPAR	5-35%
POTASSIUM FELDSPAR	5-30%
OTHER	5-20%
