

W467 VOLAT-HALT

EXPANDED CLAY GRANULES

THE COMPANY

Widdar is a company working in the field of **special nutrition for conventional, integrated and organic agriculture**.

Our innovative agricultural products are based on three essential principles: **high quality, respect for the workers and respect for the environment**. Our products are completely eco-compatible.

Research, both academic and in the field, is a central part of our company policy and is facilitating the development of our innovative products.

PRODUCTS

Prior to being made available to the public, Widdar products have passed internal testing and a preliminary validation through field trials. Based on such strong experience, Widdar has produced a range of exclusive expanded clay granules formulated so as to provide customized solutions to specific situations. The expanded clay granules are prepared without any chemicals or waste materials.

COMPOSITION

Expanded clay at controlled pH.

FEATURES

WIDDAR expanded clay granules are prepared and energized using the Trinium* Method. Where **W467 VOLAT-HALT** has been sprayed, **BIRDS** have avoided the area.

This product is especially suitable for **urban areas**.

The product respects the environment and animals. However, use of VOLAT-HALT is not recommended for poultry housing.

It consists of an inert product, chemically stable, lightweight and manageable.

APPLICATION

Spread the granules throughout the area, including nesting areas, at a dose of **40-50 granules / m²** which is about 1 gram or half a teaspoon. To complete the application always treat surfaces with **ROCK POWDER W167**. Treatments with W167 and W467 should be carried out on the same day, taking care of not mixing the two products together. Repeat approx. **every 3 months**. Always check for the presence of **BIRDS AROUND THE BUILDINGS** and if necessary repeat the application.

For even better results treat **3 weeks before the period of expected maximum presence**.

STORAGE

Always keep the product dry, well sealed and out of the reach of children.

AVAILABLE in 1kg (2.2 lbs), 3Kg (6.6 lbs), 5kg (11 lbs), 10 kg (22 lbs) packs

Pursuant to art. Article 3 (1) of EC Regulation 889/2008, the clay can be used in organic production.

The application of VOLAT-HALT does not fall within the scope of art. 2 of EC Regulation 1107/2009 concerning the sale of plant protection products.

WIDDAR ROCK POWDER

W167

Rock powder that fortifies, rebalances and strengthens plants and soils. It is suitable for any type of crop and soil.

PROPERTIES

The rock powder is prepared and energized using the **Trinium*** method. Where the product has been sprayed, **BIRDS** have avoided the area.

This product is especially suitable for land that is **cultivated, close to roads or in parks, gardens, etc.**

This product respects the environment and animals.

APPLICATION

1 kg (2.2 lbs) of product is diluted in approx. 20 liters (5 gallons) of water and sprayed **over 1000m² (0.25 acres)** of external surface, mixed within an exterior-grade bonding product.

To complete the application always treat the same surfaces with product **W467 VOLAT-HALT**. Treatments with W167 and W467 should be carried out on the same day, taking care of not mixing the two products together. Repeat approx. **every 6 months**. Always check for the presence of **BIRDS AROUND THE BUILDINGS** and if necessary repeat the application 2-3 times every 15 days.

If **W467 VOLAT-HALT** is not applied, repeat the application with **ROCK POWDER W167** every 15 days. For best results treat **4 weeks before the period of expected maximum presence.**

STORAGE

Always keep the product dry, well sealed and out of the reach of children.

AVAILABLE in 1kg (2.2 lbs), 3Kg (6.6 lbs), 5kg (11 lbs), 10 kg (22 lbs) packs

For a correct use under specific soil and crop conditions, please seek advise from our technical department.

USAGE

Rock powder can be diluted in two ways:

- Pour the powder in the sprayer tank at the rate of 1 kg/1000m², then add the 20 litres of water. After about 30 minutes, the product is ready to be sprayed.
- In the event of problems with clogged-up sprayer nozzles, or of tear of the pump bearings, place the powder in a bucket, add 5 litres of water, stir 2-3 times. After about 30 minutes, pour the solution into the sprayer tank using a suitable filter. Then add the rest of the water.

Please note that the diluted solution does not expire when kept in a tightly sealed tank.

NOTICE

Please note that the usage of the specific products on the plants and the soil needs to always be used within the whole **Trinium** agricultural method, otherwise they will not be effective. The products must also be contained and applied using barrels and pumps free of any residue of non-Widdar products. Barrels must be thoroughly

If it rains within 3 hours of the application the effectiveness of the treatment will be reduced by about 20%.

If it rains within 2 hours the whole treatment will be ineffective and must be repeated.

AVERAGE MINERALOGICAL ANALYSIS		OTHER CHARACTERISTICS	
QUARTZ	20-40%	MOISTURE	<5%
CALCITE	5-30%	pH	6,5-7%
SODIUM FELDSPAR	5-35%		
POTASSIUM FELDSPAR	5-30%		
OTHER	5-20%
